

Payment-Level Detection Rules Catalogue - Tier A Evaluable Controls

Rules decidable from origin, destination, institution, account and amount alone

Document ID	OPS-RULE-021
Document type	Detection rule catalogue
Jurisdiction code	GLOBAL
Applies to corridors	All - the rule set is selected by corridor
Issuing body (simulated)	Financial Crime Analytics Centre (simulated)
Version / effective date	v1.0 - May 2026
Modelled on public sources	Derived from the typology casebook and the jurisdiction matrix, expressed against payment message fields only
Classification	SYNTHETIC - HACKATHON TRAINING DATA

This document is synthetic content authored for a multi-agent fraud intelligence hackathon. It paraphrases the structure and themes of public materials (Derived from the typology casebook and the jurisdiction matrix, expressed against payment message fields only) but contains no verbatim reproduction of them. Thresholds, codes and identifiers are illustrative.

1. Scope and reading instructions

Every rule below is decidable using only Tier A data as defined in OPS-SCOPE-020: origin and destination institution and country, account identifiers, account age and status, amount, currency, value date, transaction type, and any prior alert or confirmed case history on either account. No rule in this catalogue requires an identity document, a beneficial ownership record, a purpose declaration or an invoice.

The assessing agent shall evaluate every rule in the applicable set and return TRIGGERED or NOT_TRIGGERED for each. A rule may not be skipped. Where a Tier A field required by a rule is genuinely null on the record, that single rule returns INSUFFICIENT_DATA and names the field.

Rule selection: always evaluate the GEO, AMT, ACCT and HIST families. Evaluate the NET family only where the assessment receives more than one transaction. Evaluate the corridor-specific rule for the origin jurisdiction and for the destination jurisdiction. Weights are additive and are defined in section 8.

2. GEO family - corridor and routing

Rule ID	Condition on Tier A fields	Outcome if met
GEO-01	Corridor rating derived from OPS-GEO-005 is HIGH	TRIGGERED - weight 2
GEO-02	Corridor rating is PROHIBITED, or either country is under a call for action or a sanctions programme	TRIGGERED - weight 5, immediate block

Rule ID	Condition on Tier A fields	Outcome if met
GEO-03	Institution country differs from the account country on either leg, indicating routing through a third jurisdiction	TRIGGERED - weight 2
GEO-04	Both legs rated 1 or 2 and the corridor is a recognised commercial pair	NOT_TRIGGERED - negative signal, weight minus 1
GEO-05	Settlement currency is the currency of neither the origin nor the destination country	TRIGGERED - weight 1
GEO-06	Either leg is an offshore centre, free zone or special economic zone per the corridor modifiers in OPS-GEO-005 section 3	TRIGGERED - weight 2
GEO-07	The corridor pairs two jurisdictions whose dominant typologies overlap, for example two trade hubs or two precious stone trading centres	TRIGGERED - weight 1

3. AMT family - amount and threshold behaviour

Threshold values are taken from the local regulation document of the relevant jurisdiction. Each rule tests the relationship between the amount and a published threshold, which requires no documentation whatsoever.

Rule ID	Condition on Tier A fields	Outcome if met
AMT-01	Amount falls between 90% and 99.9% of a reporting or identification threshold applicable in the origin or the destination jurisdiction	TRIGGERED - weight 3, tag THRESHOLD_PROXIMITY
AMT-02	Amount is a round figure at or above 10,000 units of the settlement currency with no minor units	TRIGGERED - weight 1

Rule ID	Condition on Tier A fields	Outcome if met
AMT-03	Amount exceeds the large-value reporting threshold of either jurisdiction	TRIGGERED - weight 1, tag REPORTABLE
AMT-04	Amount is at or just below a personal annual foreign exchange facility, where either leg operates one	TRIGGERED - weight 3, tag FX_FACILITY
AMT-05	Amount is below the identification threshold of the origin jurisdiction while the corridor is rated HIGH	TRIGGERED - weight 2
AMT-06	Amount exceeds the largest prior transaction observed on the account by a factor of 10 or more	TRIGGERED - weight 3, tag STEP_CHANGE
AMT-07	Amount matches, within 2%, an amount credited to the same account within the preceding 72 hours	TRIGGERED - weight 3, tag PASS_THROUGH

4. ACCT family - account attributes

Rule ID	Condition on Tier A fields	Outcome if met
ACCT-01	Either account was opened less than 90 days before the value date	TRIGGERED - weight 3, tag NEW_ACCOUNT
ACCT-02	Either account had no activity for 180 days or more before this transaction	TRIGGERED - weight 3, tag DORMANT_REACTIVATION
ACCT-03	The destination account sits at an institution whose country rating exceeds that of the origin institution by two levels or more	TRIGGERED - weight 2

Rule ID	Condition on Tier A fields	Outcome if met
ACCT-04	Either account is flagged as belonging to a payment institution, money service business or virtual asset service provider	TRIGGERED - weight 2, tag FI_COUNTERPARTY
ACCT-05	The holder on either leg is a legal person registered less than 12 months before the value date, where the registration date is carried on the account record	TRIGGERED - weight 2
ACCT-06	Origin and destination accounts share an institution and branch identifier while the corridor is cross-border	TRIGGERED - weight 1
ACCT-07	Account status on either leg is restricted, under review, or subject to an existing hold	TRIGGERED - weight 4

5. HIST family - prior involvement

This family consumes the output of the upstream data agent, which identifies accounts previously involved in a laundering intent, alert or case. It is the highest-value evaluable family, because it requires no documentation at all and reflects confirmed history rather than inference.

Rule ID	Condition on Tier A fields	Outcome if met
HIST-01	Either account was previously the subject of a report filed with a financial intelligence unit	TRIGGERED - weight 5, tag PRIOR_REPORT
HIST-02	Either account was previously subject to an alert closed without a report	TRIGGERED - weight 2
HIST-03	Both accounts appear together in the same prior case	TRIGGERED - weight 5, tag KNOWN_PAIR
HIST-04	Either account has transacted, within two hops, with an account carrying a filed report	TRIGGERED - weight 3, tag PROXIMITY_TO_KNOWN

Rule ID	Condition on Tier A fields	Outcome if met
HIST-05	Neither account carries any prior alert, case or report	NOT_TRIGGERED - negative signal, weight minus 2
HIST-06	This specific account pair has transacted three or more times in the preceding 90 days with no adverse outcome	NOT_TRIGGERED - negative signal, weight minus 1, tag ESTABLISHED_PAIR

6. NET family - multi-transaction and network features

Evaluate only where the assessment receives a set of transactions rather than a single record. These rules restate the casebook typologies purely in terms of Tier A fields, so that a typology can be evidenced without any customer documentation.

Rule ID	Condition on Tier A fields	Outcome if met
NET-01	Six or more credits to one account within 10 days, each between 70% and 99% of a local threshold, from three or more distinct originators	TRIGGERED - weight 5, tag STRUCTURING
NET-02	Eight or more distinct originating accounts credit one account within 30 days, with onward transfer to two or fewer beneficiaries	TRIGGERED - weight 5, tag FAN_IN_FAN_OUT
NET-03	Median holding time between credit and onward debit is under six hours across three or more transactions	TRIGGERED - weight 4, tag RAPID_PASS_THROUGH
NET-04	A closed cycle exists in the account graph returning 55% to 95% of an initial outflow within 45 days	TRIGGERED - weight 5, tag ROUND_TRIP
NET-05	A chain of three or more accounts in which each hop retains between 0% and 3% of the value	TRIGGERED - weight 4, tag CHAIN

Rule ID	Condition on Tier A fields	Outcome if met
NET-06	Four or more distinct origin accounts remit to a single destination account within 30 days, each amount near a personal facility ceiling	TRIGGERED - weight 4, tag FX_SMURFING
NET-07	Transaction count on an account in a 7 day window exceeds five times its trailing 90 day weekly mean	TRIGGERED - weight 3, tag VELOCITY

7. Corridor-specific evaluable rules

One rule per jurisdiction, expressed only against Tier A fields, evaluated whenever that jurisdiction appears on either leg. Each cites its source document so that the finding remains auditable without any documentary input.

Rule ID	Jurisdiction condition on Tier A fields	Source
LOC-ES	Amount between 900 and 1,000 EUR, or repeated amounts just below 1,000 EUR to the same beneficiary within 30 days	ES-REG-006 s.2
LOC-DE	Cash-type credit between 9,000 and 10,000 EUR, or a precious metals counterparty with amounts near 2,000 EUR	DE-REG-007 s.2
LOC-GB	Transfer at or just below the 1,000 EUR equivalent, or a destination institution flagged as serving company formation or trust service providers	GB-REG-008 s.1
LOC-US	Currency-type activity aggregating between 9,000 and 10,000 USD in one business day, or monetary instrument amounts between 2,700 and 3,000 USD	US-REG-009 s.2, s.3

Rule ID	Jurisdiction condition on Tier A fields	Source
LOC-SG	Wire amount at or just below SGD 1,500, or an occasional transaction just below SGD 20,000	SG-REG-010 s.1
LOC-AE	Amount at or just below AED 55,000 where the counterparty institution sits in a free zone	AE-REG-011 s.2
LOC-MX	Repeated USD-denominated credits to a border-region institution, or amounts clustered just below the dollar cash cap	MX-REG-012 s.2
LOC-NG	Credits to an account flagged as low tier that exceed the tier cumulative limit within 7 days	NG-REG-013 s.1
LOC-PA	Destination account held by a legal person at an institution flagged as serving resident agent structures, with account age under 12 months	PA-REG-014 s.2
LOC-IL	Amounts clustered just below the statutory business cash ceiling, or a counterparty institution flagged as serving the precious stones sector	IL-REG-016 s.3
LOC-BD	Inbound credits from a Gulf corridor to one account from four or more distinct originators in 30 days, or a credit to a mobile financial services wallet followed by same-day debit	BD-REG-017 s.4
LOC-BE	Amounts clustered just below 3,000 EUR across instalments to the same counterparty, or a counterparty institution flagged as serving the diamond trade	BE-REG-018 s.3

Rule ID	Jurisdiction condition on Tier A fields	Source
LOC-CN	Cash-type or cross-border amount between 90% and 99.9% of the RMB 50,000 or USD 10,000 reporting threshold, or several origin accounts remitting near the annual facility to one foreign beneficiary	CN-REG-019 s.3, s.4

8. Scoring and required output

Total weight	Outcome	Meaning
Below 0	NO ADVERSE PAYMENT-LEVEL INDICATORS	Negative signals dominate; release
0 to 2	LOW	Release with logging
3 to 5	MONITOR	Release; watch both accounts for 30 days
6 to 9	ENHANCED REVIEW	Hold; request the named Tier B or Tier C evidence
10 or more, or any weight 5 rule triggered	ESCALATE	Hold; open a case
GEO-02 triggered	BLOCK	Block irrespective of the total

- Every assessment lists the rules evaluated, the outcome of each, and the total weight. A rule evaluated and not triggered is as informative as one that triggered, and must be shown.
- Every TRIGGERED rule cites the source document identifier and section, taken from the corridor local document, the jurisdiction matrix or the typology casebook.
- Where the outcome is ENHANCED REVIEW or above, the agent names the specific documentary evidence a reviewer should obtain, as a next action.
- The agent shall not report absent documentation as a deficiency, and shall not use INSUFFICIENT_DATA for a control that was never in scope. See OPS-SCOPE-020 section 3.
